

Arzan Financial Group

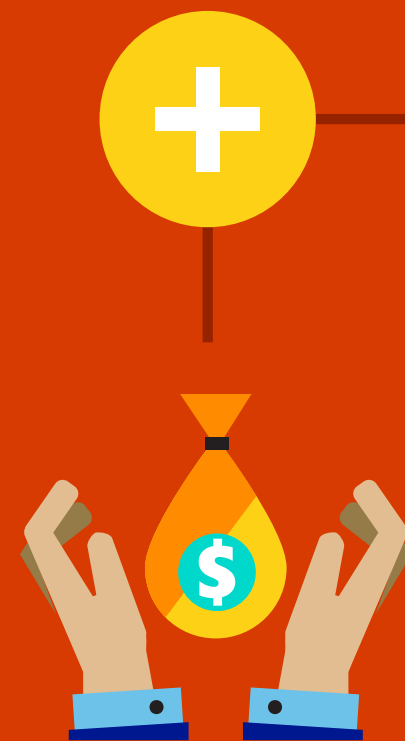

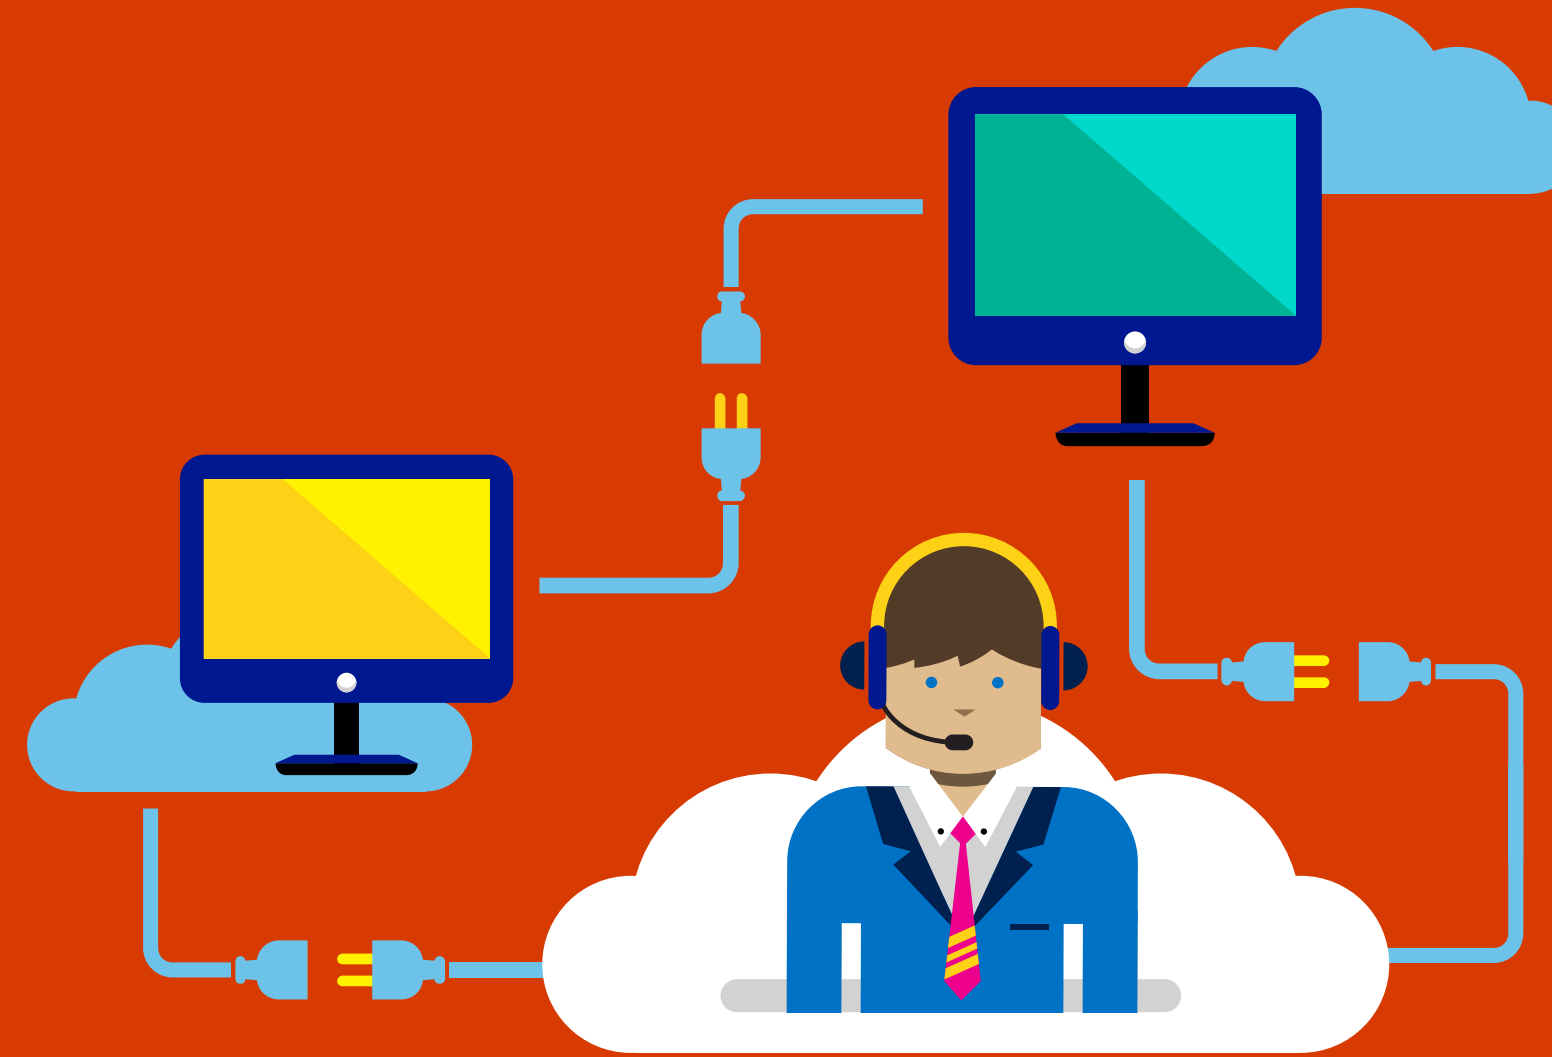

Arzan Financial Group needed to consolidate its disparate IT infrastructure to drive the business forward and ensure high levels of customer service. It implemented a raft of Microsoft technologies which are helping it deliver the best returns for its clients and underpinning wider growth.

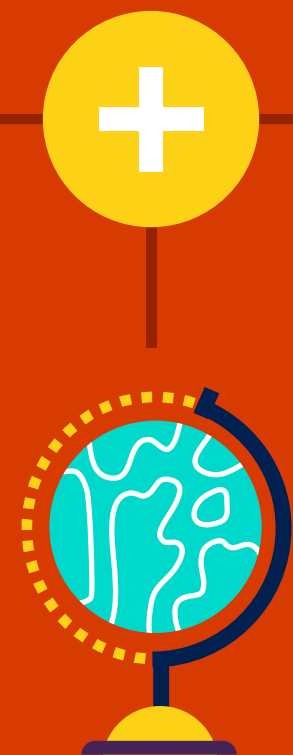

Since it's a Microsoft Platform, unified communication makes it easy for the business users to communicate when they are abroad. Arzan now has a robust security platform that is highly scalable and integrates easily with third party products.
