

Mobile Doctors 24/7

Mobile Doctors wanted to move IT to the cloud so employees could focus on core tasks but it had security concerns. It turned to Azure and Office 365 because of the security provided by SSL- TSL 128bit encryption. The platform is not only cost effective but staff now focus exclusively on patients.

“
Seventy percent of non-life threatening conditions can be resolved by speaking to a doctor over the phone. With Office 365 and Azure we can now focus exclusively on this and meeting patient needs.
”

Raouf Khalil
Founder and Chief Executive Officer
